

Thai Minh Tan

DATA & AI PLATFORM LEAD

I design and deliver enterprise data & AI platforms on AWS — lakehouses, OLAP/CDP, MLOps/AIOps and multi-agent GenAI systems — for Vietnam's leading banks and enterprises.

01 About

Data & AI Platform Lead with **7+ years of engineering experience**, including **6 years designing and delivering data platforms**, lakehouses, OLAP/CDP systems and ML/AIOps platforms on AWS for major Vietnamese banks, consumer-finance, aviation and FMCG enterprises. Grew from hands-on data engineer to platform lead: **15+ client data platform deliveries**, technical proposals and solution architecture for enterprise programs (AWS + Databricks), leading the data workstream of a large internal platform program, and building **multi-agent GenAI assistant platforms on AWS Bedrock**. AWS Certified Solutions Architect and AI Practitioner, combining hands-on depth (Python, Spark, Airflow, dbt, Terraform, Kafka) with technical leadership, delivery governance and team mentorship.

Data & AI Platform Lead

Mar 2026 - Present

TechX · Ho Chi Minh City

Solution architecture and delivery of enterprise data & AI platforms; leading the data engineering workstream and team.

- ▶ **Enterprise data platform (top-4 bank):** Contributed to solution architecture and technical documentation for an enterprise data platform program at a top-4 state-owned bank (AWS + Databricks): lakehouse & governance design with a SOC 2-aligned roadmap; built TechX's internal Delivery Ops platform (FastAPI, Next.js, Airflow, dbt) to track progress and govern deliverables, with 95 automated data-quality checks.
- ▶ **AIOps platform:** Data platform lead for an end-to-end AIOps product (reference client: a leading private bank) — real-time anomaly detection, correlation and root-cause analysis on Kafka, Flink, Apache Doris, SageMaker and Bedrock; led a medallion re-platform of 80+ tables and an RCA evaluation framework.
- ▶ **Agentic operations platform:** Workstream Lead & Lead Data Engineer on a cross-functional internal platform program: owned the data foundation and governance layer — Airflow + dbt medallion pipelines, tamper-evident data lineage, reconciliation checks and 21 Terraform-managed AWS stacks; managed and mentored the data engineering sub-team.
- ▶ **GenAI assistant platform:** Tech Lead of a multi-agent AI assistant platform for a commercial bank — multi-agent orchestration on Strands SDK + Bedrock AgentCore, RAG knowledge base on OpenSearch with automated content sync, enterprise SSO, human-in-the-loop review workflows, and full Terraform IaC (ECS, ALB, RDS).
- ▶ **Aviation analytics:** Solution Architect for an airline AIOps/analytics proposal: profiled real revenue data feeds (60k+ transactions) to validate feasibility, defined 14 data/AI use cases across 6 product modules integrating with core aviation systems, and led MVP-scoping workshops with client leadership.
- ▶ **Team leadership:** Manage and mentor data team members across projects — planning and task breakdown, removing blockers, design & code reviews, coaching toward independent delivery.

Senior Data Engineer

Oct 2024 - Mar 2026

TechX · Ho Chi Minh City

Owned architecture and hands-on delivery of client data platforms across concurrent banking engagements.

- ▶ **Digital-bank OLAP platform:** Designed and built a digital bank's OLAP platform end-to-end: dbt-on-Spark framework on EMR (EC2 & Serverless) with S3 Tables, Terraform IaC and CI/CD to production; delivered GL-balance and regulatory aggregate reports with full architecture and operations documentation.
- ▶ **MLOps platform:** Delivered an ML platform for a leading private bank: feature-store deployment automation, batch model serving, model-monitoring orchestration, security/network architecture, Grafana observability; ran SIT and client training workshops.
- ▶ **Data mesh:** Designed a hub-spoke data mesh for a commercial bank: orchestration & distribution engines, dbt-based data quality with Grafana dashboards, Redshift and S3 Tables integration.
- ▶ **SaaS data product:** Core engineer of an in-house SaaS data platform product: JDBC/BigQuery/SAP HANA connectors, agent-based EMR extraction, OpenSearch, billing services, Terraform provisioning — reused across multiple client deliveries.
- ▶ **GenAI platform:** Designed prompt & knowledge-base data management for an internal GenAI platform (Helm-based production deployment, n8n workflows); contributed proposal architectures for bank GenAI use cases.
- ▶ **Consulting & POCs:** Securities-firm data platform POC, OpenMetadata governance rollouts across client ecosystems, voicebot data pipelines, and data-lake operations for an industry group through formal client handover.

Middle Data Engineer

Jun 2022 – Oct 2024

TechX · Ho Chi Minh City

Hands-on delivery of AWS data platforms for banking, consumer finance, aviation and FMCG clients.

- ▶ **Banking data platforms:** Built data platforms and OLAP/CDP systems for a top private bank group and its digital-bank and consumer-finance arms: medallion pipelines, core-banking ingestion, card-network reconciliation, identity resolution, on-prem → AWS batch ingestion with Step Functions.
- ▶ **ETL framework:** Developed the company-wide PySpark ETL framework and reusable ingestion/transformation libraries adopted across client projects; contributed to an Iceberg/Athena transactional lake and Data Quality as a Service.
- ▶ **Databricks CDP:** Provisioned Databricks-based CDP infrastructure for a commercial bank (Terraform, dev/UAT workspaces, Databricks SDK, Jenkins CI/CD).
- ▶ **Aviation & FMCG:** Delivered an airline analytics platform (batch pipelines, SFTP ingestion, config-driven orchestration) and an FMCG data-lake POC (real-time producers, Redshift evaluation, dimensional modeling, data catalog).
- ▶ **Integration & governance:** ETL design and orchestration for a top private bank's data integration hub (file encryption, source readiness); OpenMetadata governance deployments across client ecosystems.
- ▶ **Documentation & delivery:** Created architecture designs, comprehensive documentation and training materials for client stakeholders; delivered consistently under tight deadlines with a customer-centric approach.

Data Engineer

Jul 2021 – Jun 2022

VNG Corporation · Ho Chi Minh City

- ▶ Developed and optimized large-scale on-premises data warehouse and data lake systems on the Hadoop ecosystem.
- ▶ Designed and implemented data models and pipelines to process large-scale data efficiently using Hadoop, Spark and Hive.
- ▶ Re-platformed legacy data warehouse workloads, improving performance and scalability.
- ▶ Built automated systems for data-quality assurance and anomaly detection.

Data Engineer

Jul 2020 - Jul 2021

Maritime Bank (MSB) · Hanoi

- ▶ Engineered data pipelines to process and transform big data per business requirements.
- ▶ Developed and maintained AWS-based data warehouse and data lake systems.
- ▶ Ensured data accuracy and reliability through proactive quality management and monitoring; collaborated on data architecture solutions supporting banking operations.

Software Engineer

Feb 2019 - Jul 2020

Tuong Minh Software Solutions (TMA) · Ho Chi Minh City

- ▶ Developed front-end and back-end applications for smart-learning, smart-city and education platforms.
- ▶ Integrated machine-learning models into applications; designed and optimized databases to support application performance.

Education & Certifications

B.Sc. Management Information Systems

Saigon University, HCMC · 2015 – 2019

AWS Certified Solutions Architect

Amazon Web Services

Certified

AWS Certified AI Practitioner

Amazon Web Services

Certified

05

Additional Information

Architecture-first

Expertise in applying architectural principles to optimize platform designs around customer needs and constraints.

Delivery under pressure

Proven track record of leading teams and delivering complex, multi-stream programs under pressure.

Communication

Strong documentation and communication skills for both technical and executive audiences.
